DIRECTIONS

To solve this puzzle you must guess twenty-odd WORDS, the definitions of which are given in the column headed DEFINITIONS. Alongside each definition, there is a row of dashes—one for each letter in the required word. When you have guessed a word, write it on the dashes, and also write each letter in the correspondingly numbered square of the puzzle diagram. When the squares are all filled in, you will find that you have completed a quotation from some published work. If read up and down, the letters in the diagram have no meaning. . . . Black squares indicate ends of words; if there is no black square at the right side of the diagram, the word carries over to the next line. . . . When all the WORDS are filled in, their initial letters spell the name of the author and the title of the piece from which the quotation has been taken. Of great help to the solver are this acrostic feature and the relative shapes of words in the diagram as they develop. Authority for spellings and definitions is Webster's New International Dictionary, Second Edition.

Solution of last week's Double-Crostic will be found on page 10 of this issue.

**When your petroleum products go overseas
talk to the people at Chase Manhattan**

**Use a world-wide network of
51,000 bankers-at-the-spot**

* * *

When you take your international trade problems to Chase Manhattan, the services of a world-wide network of 51,000 correspondent banks and branches are immediately at your disposal.

You get the overseas help you need from the banker-at-the-spot . . . the man who has an intimate knowledge

of local trade conditions and knows how to make them work for you.

This is possible only because Chase Manhattan has a close personal relationship with its foreign correspondents. Chase Manhattan and its stateside correspondents handle the U.S. problems of the Bank's overseas correspondents. They, in turn, get things done for Chase Manhattan in their own countries. Such reciprocity enables you to get more efficient banking service in world markets.

If you have import or export problems, phone HANover 2-6000 or write to International Department, The Chase Manhattan Bank, 18 Pine Street, New York 15.

MEMBER FEDERAL DEPOSIT INSURANCE CORPORATION

ONE IN A SERIES OF SEASHELL-INSPIRED ART TREASURES
PRESENTED BY SHELL OIL COMPANY

Gold cup, Italian 16th Century by Benvenuto Cellini. Decorated with enamel and precious stones. The Metropolitan Museum of Art, New York. Bequest of Benjamin Altman 1913

"Genius is an infinite capacity for taking pains"

The ignition of genius is an idea. Artists since the beginning of time have gone to the shell, and indeed all nature, for ideas, just as Cellini chose to immortalize the seashell and the legends around it.

But only the coupling of a noble idea with masterful execution can create timeless art. This holds true in science, too. A chemist's inspiration, a physicist's concept gained from the observation of nature come to nothing without painstaking research and laboratory perfection.

That is why hundreds of Shell scientists devote so much money and manpower to petroleum research by constantly developing and expanding scientific ideas. Imaginative Shell research perfects petroleum products that perform better, last longer, and cost less. Millions know these products by the sign of the familiar shell.
